

The data and analytics layer beneath the grant tools.

Grant tools find open opportunities and run the grant workflow. SciRise prioritizes where to spend time and relationship capital.

	APPLICATION WORKFLOW Instrumentl · Candid · AI tools	FUNDING STRATEGY SciRise Capital Graph
OUTPUT	An untested match score	A ranking validated on outcomes
METHOD	Score funder fit from mission and program text.	Resolve the record into organizations and relationships, then rank who is most likely to fund you next.
DATA SOURCE	Foundation data, plus open-web and training-data search.	990 and 990-PF filings, federal awards, international aid, audits, disclosures and websites. See coverage ↗

WHAT THE GRAPH ANSWERS

Funder prediction

Who is most likely to start giving to us.

Peer benchmarking

How we compare to organizations funded like us.

Intermediary flows

Who funds our field through DAFs and regranters.

Landscape mapping

Where capital concentrates in a mission or state.

USED TOGETHER

SciRise decides where to spend relationship capital. Once the targets are set, grant tools do what they do best: surface the open calls for those funders and run the application workflow.

CAPABILITY	INSTRUMENTL · CANDID	SCIRISE
Open calls, RFPs, deadlines and application workflow	✓	–
Free-text recipient names resolved to verified organizations	–	✓
Disclosed intermediaries identified: DAFs, sponsors, regranters	–	✓
Foundation, federal, financial and leadership data connected	Limited / manual	✓
Predictive funder ranking validated on holdout-year outcomes	–	✓

31%

TOP-10 HIT RATE

>10×

best tested baseline

PREDICTION, NOT DESCRIPTION

In validation testing, for nonprofits that added a new funder, SciRise placed at least one new funder in its top 10 **31% of the time**, more than **10×** the top-10 hit rate of the strongest tested mission-alignment baseline. Prediction algorithm patent pending.

Trained on multi-year IRS 990/990-PF filings, tested on a later holdout year never seen in training, replicated across test windows. Repeat grants excluded, so the model must predict funders new to the organization.
